No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1993 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

Microchemical Journal

INFORMATION FOR AUTHORS

The MICROCHEMICAL JOURNAL will invite research papers on all phases of chemistry, including clinical and biochemical, which involve small-scale manipulation. This will include both organic and inorganic work on preparation, purification, separation, detection, determination, trace analysis, and all types of instrumentation.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved of the citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Microchemical Journal* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted to **Dr. Joseph Sneddon, Department of Chemistry, McNeese State University, Lake Charles, Louisiana 70605.**

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. American spelling conventions should be used. At least two copies should be submitted, each copy to include all figures and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), and address to which proofs should be mailed. Please number all pages of manuscript.

Authors are encouraged to use descriptive subheadings in this order: Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgments, and References. Every article should have a definitive title. The use of series numbering is strongly discouraged.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described: if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Units of weight, measures, etc. when used in conjunction with numerals should be abbreviated and unpunctuated (e.g., 10%, 50 ml, 3 g, 8 cm, 5 μg, 3μl).

Names of compounds should agree with those presently in use by Chemical Abstracts.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced.

All figures and illustrations are to be submitted in such form as to permit photographic reproduction without retouching or redrawing. This includes the lettering which is reproduced as part of the photoreproduction and is not set in type. (Lettering should be done with a lettering device, such as Leroy.) Line drawings should be carefully drafted with black India ink on white drawing paper or blue drafting cloth, no larger than 8.5 × 11.5 inches (21 × 27.5 cm). The lettering should be large enough so that when reduced by two-thirds it will still be legible. High quality glossy prints are acceptable. Xerox prints are not acceptable. Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet: in tables, by superscript letters and placed at bottom of page containing table.

References should be numbered consecutively in order of their citation. The text citations may then consist of either just the italic number of the reference enclosed in parentheses and set on the text line or of the name (or names) of the author(s) followed by the italic number enclosed in parentheses. In the text citation, if there are more than two authors of a given reference use the surname of the first author followed by "*et al.,*" "and co-workers," or "and associates." All authors' names should be included in the reference list itself.

For abbreviations of journal titles in the reference list please follow the forms used in *Chemical Abstracts Service Source Index,* 1985.

Pattern styling, punctuation, and capitalization after these examples, noting the particular style for journal articles, books, and edited (multi-author) books.

1. La Plante, R. J.; Thibert, R. J. *Microchem. J.,* 1985, **31,** 304–317.

2. Allen, R. C. Biochemiexcitation: Chemiluminescence and the study of biological oxygenation reactions. In *Chemical and Biological Generation of Excited States* (W. Adam and G. Alento, Eds.), pp. 61–121. Academic Press, New York, 1982.

3. Vanasse, G. A. *Spectrometric Techniques,* Vol. 3. Academic Press, New York, 1984.

The use of "personal communication" and "unpublished observations" as citations in the text should be avoided.

Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article will be provided free of charge.

Personal computer disks. Manuscripts may be submitted to *Microchemical Journal* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 1250 Sixth Avenue, San Diego, California 92101; telephone: (619) 699-6415; fax: (619) 699-6800).

Pesticide Biochemistry and Physiology

An International Journal

Editor
Fumio Matsumura
University of California, Davis

Pesticide Biochemistry and Physiology publishes original scientific articles pertaining to the mode of action of plant protection agents such as insecticides, fungicides, herbicides, and similar compounds including nonlethal pest control agents, biosynthesis of pheromones, hormones, and plant resistance agents. Manuscripts may include a biochemical, physiological, or molecular study for an understanding of comparative toxicology or selective toxicity of both target and nontarget organisms.

Research Areas Emphasized Include the Biochemistry and Physiology of

- Comparative toxicity
- Metabolic effects
- Mode of action
- Pathophysiology
- Plant growth regulators
- Resistance
- Other effects of pesticides on both parasites and hosts

Volumes 45 – 47 (1993), 9 issues ISSN 0048-3575
In the U.S.A. and Canada: $378.00 All other countries: $461.00

Sample copies and privileged personal rates are available upon request.

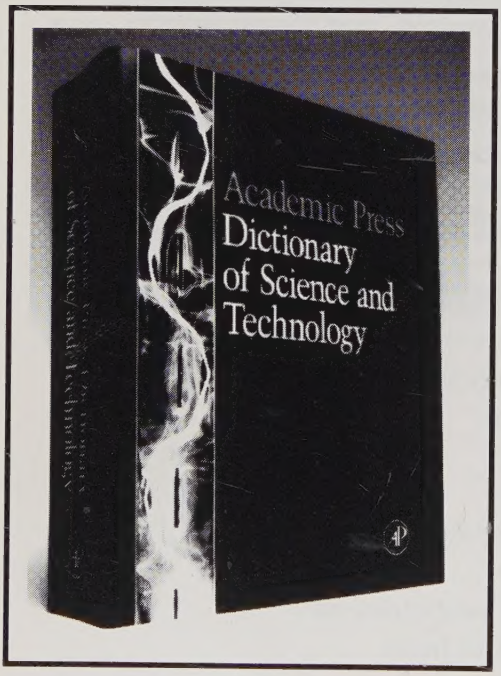
The New Standard of Excellence.

The most comprehensive, authoritative scientific dictionary now available, the **Academic Press Dictionary of Science and Technology** offers you, in one volume, the largest collection of scientific terms available in any single reference source. Containing complete, practical definitions for 133,000 words (not counting abbreviations), the **Dictionary** covers key terminology in 124 fields of science and technology—including Molecular Biology, Computer Science, Physics, Engineering, Chemistry, Ecology, Behavior, Geophysics, Veterinary Science, Mathematics, Astronomy, Biotechnology, and numerous other fields.



September 1992, 2432 pp., $115.00/ISBN: 0-12-200400-0

Prices subject to change without notice. ©1993 by Academic Press, Inc. All Rights Reserved. LK/CEP/ST—41013.

Key Features Include

- 133,000 fully-defined entries—more than any other scientific dictionary
- Complete coverage of 124 fields of science ranging from Acoustics to Zoology
- Single volume, large 8½" x 11", double-column format for easy access
- Cutting-edge definitions in such dynamic fields as Artificial Intelligence and Biotechnology
- More medical terms than any other general scientific dictionary now available
- More coverage of subfields of medicine, including rapidly growing disciplines such as Oncology, Radiology, Hematology, Cardiology, and Toxicology
- More than 2000 detailed illustrations and technical photographs, including 24 pages of color plates
- Pronunciation guides for difficult or phonetically irregular terms
- Complete appendix of frequently consulted scientific data, including the periodic table, standard weights and measures, and a Chronology of Science

Another distinctive feature of the **Dictionary** is its 124 "Windows." These boxed essays are written by leading scientists in the field, such as Michael DeBakey, Stephen Jay Gould, Joshua Lederberg, Arthur Kornberg, Linus Pauling, Roger Revelle, and Rosalyn Yalow, each of whom offers a brief introduction to his or her area of expertise. Presenting practical, concise information on each discipline, the "Windows" help make the terminology easier to understand.

The Only Source You Need for Scientific Terminology

If your library, institution, or corporation serves practicing scientists and professionals in any scientific field—engineers, computer professionals, and other technical personnel; high school, college, and graduate students; writers, researchers, and educators working with a scientific vocabulary; or general readers interested in science—then the **Academic Press Dictionary of Science and Technology** is the only scientific dictionary you need. The definitions are clear and accessible to the non-specialist, yet provide all the technical information the specialist requires.

Set a new standard of excellence by adding the **Academic Press Dictionary of Science and Technology** to your reference collection.

It will become your reference of choice.
